Dear Mr/Ms,

Freshly graduated from engineering school. I began the search for my first job position in embedded systems to start my professional adventure.

An electrical engineer from Morocco's school of engineering "ENSAK", I had the chance to continue my studies in France, to pursue my passion for electronics and coding to become an embedded system engineer in "ESIX Normandie" as I gained multiple skills related to electronics, coding, image plus signal processing as you can notice in my resume attached.

In addition to the knowledge acquired in school, I had the opportunity to practice what I learned during two internships. First, in Sofia, the capitol of Bulgaria, where I worked on a firmware development project using C language for different peripherals using multiple protocol communication. This experience gave me the opportunity to practice and reinforce my coding and electronics skills. In addition, I discovered practical tools of debugging and testing through the guidance of my supervisor. It was also a chance to practice my English and expand my social and professional circle.

The second one, it was in Paris where I worked in a company that develops a directional speaker. In a team with acoustic and signal processing researchers, hardware engineers plus embedded and mechanical ones. Every day is a chance to advance as we learn from each other to move forward to our goals. I worked with C and python languages to develop drivers for many peripherals using an Stm32 Microcontroller.

I am excited by the chance to gain my skills in Embedded Systems and Electronics, Software development testing and to join your development team. Ambitious and autonomous, "I like to challenge myself. I like to try new things and aspire to keep growing". I would be very thrilled to contribute to your organization's work and I am prepared to engage in continuous learning. Thus, I would like to apply for this job position. You may be interested in more precise details about my academic and professional background, and I am enclosing my resume for your review.

Available quickly, I am at your disposal for a closer examination of my application. In the meantime, please find attached my resume Thank you for taking time to consider this application. I look forward to hearing from you in the near future.

With best regards,

ZANFI Oussama
